

SIRIPORN INTRODUCES PUERARAGEL-B WITH VITAMIN C FEATURING PUERARAPREM

Dear Customer

Thank you for purchasing our products and putting your confidence in us. We are working hard to bring unique and innovative products to the market place. We want our customers to look young and stay young. This product features **Pueraraprem, Ultra low molecular weight hyaluronic acid, and magnesium ascorbyl phosphate.**

PueraraPremtm “The highest quality pueraria mirifca in the world”

PueraraPremtm is the organically grown brand of Pueraria Mirifica we use in our products. It is the very highest quality in the world. It is unique for the following reasons: Plants from the wild from all over Thailand have been studied for close to 20 years. Only the highest quality plants with the most unique genetic profiles were selected for cultivation.

Proprietary nutrient enrichment protocols have been studied and are still ongoing and implemented. These cultivars have been moved to the most appropriate area of Thailand that supports the most ideal conditions for Pueraria Mirifica farming. These factors along with a 7 to 10 year harvest cycle produce the very highest actives. The very potent chromene molecules (deoxymiroestrol, miroestrol) and secondary actives in Puerarapremtm are critically important for a unique level of estrogenicity. The profound estrogenicity affords a

Ultra Low molecular weight hyaluronic: This gel carrier is certainly much more than a carrier. This is an incredibly high tech material with proprietary modern technologies responsible for its inception. Standard HA is 1 to 1.5 million daltons compare this to Siriporn's ULMW HA which is 5000-to 10,000 daltons. The substantially smaller molecule allows it to go deep into the dermis. It is very similar to Restylane® the cosmetic filler! Hyaluronic acid is a substance that is naturally present in the human body. It is found in the highest concentrations in fluids in the eyes and joints. Hyaluronic acid is a type of polysaccharide called a glycosaminoglycan. Also known as hyaluronan or hyaluronate, hyaluronic acid occurs naturally in the human body and is central to regulating cell growth and renewal. In fact, it is found extensively in connective, epithelial, and neural cells. As such, hyaluronic acid has found its way into many skin care products, particularly anti-wrinkle formulations. In addition, it has been credited with extending life in those who consume copious amounts in the diet, resulting in the media dubbing hyaluronic acid as the ‘key to the fountain of youth.’

MAP (magnesium ascorbyl phosphate): Magnesium Ascorbyl Phosphate (MAP) is a vitamin C derivative that has better stability than ascorbic acid. In skin care MAP is often used for UV protection and repair, collagen production, skin lightening and brightening, and as an anti-inflammatory. It is also a potent antioxidant.
